

Lake Shore Gold is located in Timmins, Ontario.

The Bell Creek Complex, located approximately 20 kilometers northeast of Timmins, Ontario, consists of an underground mine and processing facility. Mineralization is associated with the Porcupine-Destor fault system within the Abitibi greenstone belt, with ore mined by narrow vein longhole stoping methods. Ore is then transported to surface via a newly commissioned 1080m deep shaft at a mining rate of 2500 tpd.

The Timmins West mine is located approximately 18 kilometres west of Timmins, Ontario, one of the world's most prolific gold camps. Mineralization is associated with the Porcupine-Destor fault system within the Abitibi greenstone belt. The Timmins West mine is comprised of the Timmins deposit, the Thunder Creek deposit, and the 144 Gap deposit. All three deposits are interconnected by underground drifts.

We are currently recruiting for: **Contract Geologist**

Job Description

In this role, you must have a good knowledge of geology, mining methods, core logging, exploration techniques, drill layout procedures and associated safety practices. Must be familiar with and be capable of mapping underground and on surface, core logging as well as generating and providing ore outlines. Required to document data and procedures, and complete formal written reports.
